

MODULATING HEAVY OIL BURNERS

▶ PRESS P/N SERIES	▶ P 140 P/N	400/800 ÷ 1600 kW
	▶ P 200 P/N	570/1140 ÷ 2280 kW
	▶ P 300 P/N	683/1710 ÷ 3420 kW
	▶ P 450 P/N	1140/2615 ÷ 5130 kW

The PRESS P/N series of burners cover a firing range from 400 to 5130 kW. Operation can be "two stage progressive" or, alternatively, "modulating" with the installation of a PID logic regulator and respective probes, which guarantees a turn down ratio of 3:1. The versatility of this range makes the burner well suited for use on steam boilers where the load factor is subject to wide variations, on thermal oil boilers and on boilers for particular heating plants, as hospitals or similar. Simplified maintenance is achieved by the Riello designed slide bar system, which allows easy access to all of the essential components of the combustion head.

TECHNICAL DATA

Model		▼ P 140 P/N	▼ P 200 P/N	▼ P 300 P/N	▼ P 450 P/N
Setting type		Modulating (with regulator and probes accessories) or Two stage progressive			
Modulation ratio to max. output		4 : 1

 Modulation range

Test conditions conforming to EN 267:
Temperature: 20°C
Pressure: 1013.5 mbar
Altitude: 100 m a.s.l.

FUEL SUPPLY

HYDRAULIC CIRCUITS

Various hydraulic circuit are available, depending on fuel output asset according to local norms of steam generators.

The burners are fitted with two valves and an oil preheater with thermostats along the oil line from the pump to the nozzle, which opening is regulated from a needle valve. A pressure regulator on the return circuit from the nozzle allows to vary the quantity of fuel burnt.

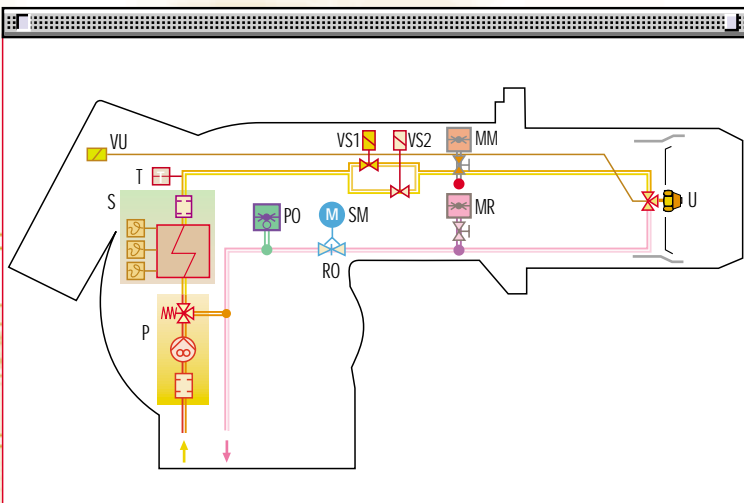

For heavy oil preheating, a special kit with three electrical heaters at the pump, at the regulator and at the nozzle could be used.

The models are fitted with a maximum pressure switch on the oil return circuit.

Example of the hydraulic circuit on PRESS 200 P/N

prEN 267 > 100 Kg/h

P	Pump with filter, heater and pressure regulator on the output circuit
S	Oil preheater with maximum, minimum and regulation thermostat
T	Thermometer
MM	Oil delivery gauge
SM	Servomotor
RO	Pressure regulator on the return circuit
PO	Oil pressure switch on the return circuit
U	Nozzle
MR	Pressure gauge on the return circuit
VU	Nozzle needle valve
VS _n	Delivery oil valves

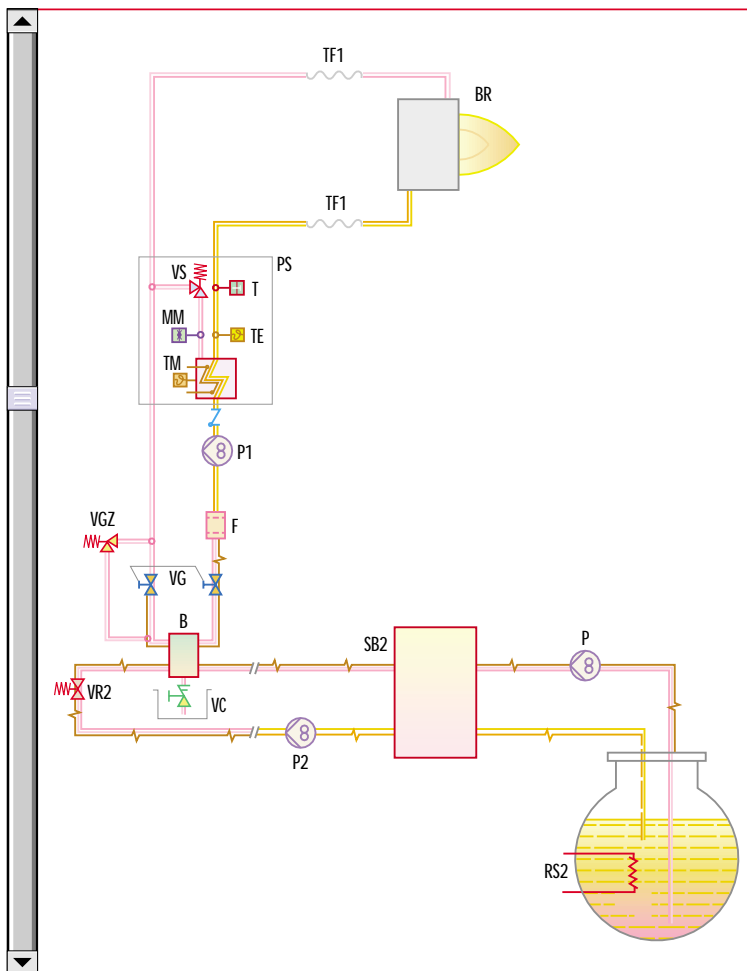

DIMENSIONING OF THE FUEL SUPPLY LINES

The fuel feed must be completed with the safety devices required by the local norms.

IMPORTANT NOTES

- The oil could easily flow through the pipes if those are properly sized, protected and heated (by electricity, steam or hot water)
- In order to limit gas or steam production the oil pressure into the gas separator shall be set in function of the supply temperature, see instructions manual.
- The forwarding pump should have at least a double capacity than that one of the burner. For several burners supplied through the same ring supply line, the forwarding pump should have a capacity of approximatively 30% more than the sum of the single burners outputs.

RS2	Tank heater
P	Double pumping unit with filter and heater on transfer ring
SB2	Service tank
P2	Double pumping unit with filter and heater on main ring
VR2	Oil valve - main ring
B	Gas separator bottle
VGZ	Safety valve - burner circuit
P1	Pump with heater - burner circuit
PS	Electrical preheater
VS	Preheater safety valve
BR	Burner
TF1	Flexible oil line
T	Thermometer
TM	Max oil temperature switch
TE	Temperature switch regulation
MM	Oil delivery gauge
VC	Vent valve
F	Oil filter

VENTILATION

The ventilation circuit is provided with a forward blades centrifugal fan, which guarantees high pressure levels at the required air deliveries and permits installation flexibility.

In spite of the remarkable output power and of the very high pressure performances, structures of PRESS models are extremely compact. The use of sound proofing boxes help in reducing the noise level.

A variable profile cam connects fuel and air setting, ensuring fuel efficiency in all firing rates.

Example of servomotor for air/light oil setting

COMBUSTION HEAD

Two different lengths of the combustion head can be chosen for the various models of the PRESS P/N series of burners.

The choice depends on the thickness of the front panel and the type of the boiler.

Depending on the type of heat generator, it is necessary to check the correct head penetration into the combustion chamber.

The internal position of the combustion head can easily be adjusted: refer to the burner instruction manual for the complete procedure.

The following diagram shows the flame dimensions in relation to the burner output. The length and diameter shown in the diagram below should be employed preliminary check: it is required a more careful investigation if combustion chamber dimensions are much different from the above reported values.

Example of a PRESS P/N burner combustion head

Dimensions of the flame

ADJUSTMENT

BURNER OPERATION MODE

The PRESS P/N series of burners can have "two stage progressive" or "modulating" operation.

Example of a regulator

On "two stage progressive" operation, the burner gradually adapts the output to the requested level, by varying between two pre-set levels (see figure A).

"Two stage progressive" operation

Figure A

On "modulating" operation, normally required in steam generators, in superheater boilers or diathermic oil burners, a specific regulator and probes are required. These are supplied as accessories that must be ordered separately. The burner can work for long periods at intermediate output levels (see figure B).

"Modulating" operation

Figure B

FIRING

- 0" The burner begins the start-up cycle: the motor starts turning.
- 5" -50" The servomotor opens the air damper at the maximum position.
- 50" -72,5" Chamber pre-purge phase with air damper open.
- 72,5" The servomotor takes the fire damper to the firing position.
- 92,5" Ignition transformer turns on. Pre-purge valves opens and oil circuit pre-purge phase takes place.
- 95" Ignition valve opens and flame rilevation with P.E. cell is activated. (*)
- 100" After a safety time of 7,5" the ignition transformer turns down if there is the flame otherwise lock-out happens.

* Time adjustable with timer.

ELECTRICAL CONNECTIONS to be made by the installer

Electrical connections must be made by qualified and skilled personnel, according to the local norms.

INSTALLATION DESCRIPTION

Installation, start-up and maintenance must be carried out by qualified and skilled personnel.
All operations must be performed in accordance with the technical handbook supplied to the burner.

BURNER SETTINGS

- ▶ All the burners have slide bars, for easier installation and maintenance.
- ▶ After removing the cover, the split pin and the pin, the nuts and the screws, dismantle the blast tube form the burner of approximatively 100-120mm and fix it to the boiler.
- ▶ Adjust the combustion head.
- ▶ Refit the burner casing to the slide bars.
- ▶ Install the nozzle, choosing it on the basis of the maximum boiler output and following the diagrams included in the burner instruction handbook.
- ▶ Check the position of the electrodes.
- ▶ Close the burner, fasten the screws, the nuts, the split pin and the pin.

HYDRAULIC AND ELECTRICAL CONNECTIONS AND START-UP

- ▶ The burners are supplied for connection to two pipes fuel supply system.
- ▶ Connect the ends of the flexible pipes to the suction and return pipework using the supplied nipples.
- ▶ Make the electrical connections to the burner following the wiring diagrams included in the instruction handbook.
- ▶ Prime the pump by turning the motor (after checking rotation direction if it is a three phase motor).
- ▶ On start up, check:
 - Pressure pump and valve unit regulator (to max. and min.)
 - Combustion quality, in terms of not-burnt substances and excess air.

ACCESSORIES

Return nozzles

The nozzles must be ordered separately. The following table shows the features and codes on the basis of the maximum required output.

Nozzle type B3 45° - with "AA" needle		
Burner	Rated output kg/h	Nozzle code
P 140 P/N	70	3009613
P 140 P/N	80	3009615
P 140 P/N	90	3009617
P 140 P/N – P 200 P/N	100	3009620
P 140 P/N – P 200 P/N	125	3009623
P 200 P/N – P 300 P/N	150	3009626
P 200 P/N – P 300 P/N	175	3009629
P 200 P/N – P 300 P/N	200	3009632
P 200 P/N – P 300 P/N	225	3009635
P 300 P/N – P 400 P/N	250	3009638
P 300 P/N – P 400 P/N	275	3009642
P 300 P/N – P 400 P/N	300	3009644
P 450 P/N	325	3009647
P 450 P/N	350	3009650
P 450 P/N	375	3009653
P 450 P/N	400	3009656
P 450 P/N	425	3009659
P 450 P/N	450	3009662

Spacers kit

If burner head penetration in the combustion chamber needs reducing, varying thickness spacers are available, as given in the following table.

Spacers to make the combustion head shorter		
Burner	Spacer thickness S (mm)	Kit code
P 140 P/N - P 200 P/N	110	3000722
P 300 P/N	130	3000723
P 450 P/N	130	3000751

Sound proofing box

If noise emissions need reducing, sound proofing hoods are available, as given in the following table.

Sound proofing hood		
Burner	Box type	Box code
P 140 P/N - P 200 P/N	C5	3000780
P 300 P/N - P 450 P/N	C6	3000781

Burner support

For easier maintenance, a mobile burner support has been designed, which means the burner can be dismantled without the need of forklift trucks.

Support	
Burner	Code
P 300 P/N - P 450 P/N	3000731

Accessories for modulating operation

To obtain modulating operation, the PRESS P/N series of burners require a regulator, with three point outlet control. The relative temperature or pressure probes fitted with the regulator must be chosen on the basis of the application.

The following table lists the accessories for modulating setting with their application range.

REGULATOR		PROBES		
Type	Code	Type	Range (°C) (bar)	Code
RWF 40	3010211	Temperature PT 100	-100 ÷ 500°C	3010110
		Pressure 4 ÷ 20 mA	0 ÷ 2,5 bar	3010213
		Pressure 4 ÷ 20 mA	0 ÷ 16 bar	3010214

Depending on the servomotor fitted to the burner, a three-pole potentiometer (0÷1000 W) can be installed to check the servomotor position. The kits available for the various burners are listed below:

Potentiometer kit	
Burner	Kit code
P 140 P/N - P 200 P/N - P 300 P/N - P 450 P/N	3010021

Gas separator bottle

It allows to recover heat in excess by discharge of the gas from the return circuit.

Degaser unit	
Burner	Degaser code
P 140 P/N - P 200 P/N	3000748
P 300 P/N - P 450 P/N	3010012

Heavy oil kit

Equipped with electrical heaters, it permits the employment of PRESS P/N burners with fuel oil of max. viscosity 65°E at 50°C.

Heavy oil kit	
Burner	Kit code
P 140 P/N - P 200 P/N - P 300 P/N - P 450 P/N	3000721

Heavy oil precirculation

This kit, used with oil with high viscosity, in maintains fuel circulation in the oil circuit for avoiding system stop at start up.

Heavy oil precirculation	
Burner	Code
P 140 P/N - P 200 P/N	3000749
P 300 P/N - P 450 P/N	3000750

Selfcleaning filter

For cleaning heavy oil from dirty particles and impurities, it is equipped with a thermostatic heater for oil with 65°E viscosity at 50°C.

FILTER		HEATERS AND THERMOSTATS	
Type	Code	Type	Code
Ø=1" 1/2 (65°E - 50°C)	3010022	Thermostatic heater with LED	3010060
		Heater	3010061
		Thermostat (two-stage / regulable)	3010062

Cartridge filter

For cleaning heavy oil from dirty particles and impurities, it is equipped with a cartridge system for oil with 7°E viscosity at 50°C.

Cartridge filter	
Burner	Filter code
P 140 P/N - P 200 P/N - P 300 P/N - P 450 P/N	3005209

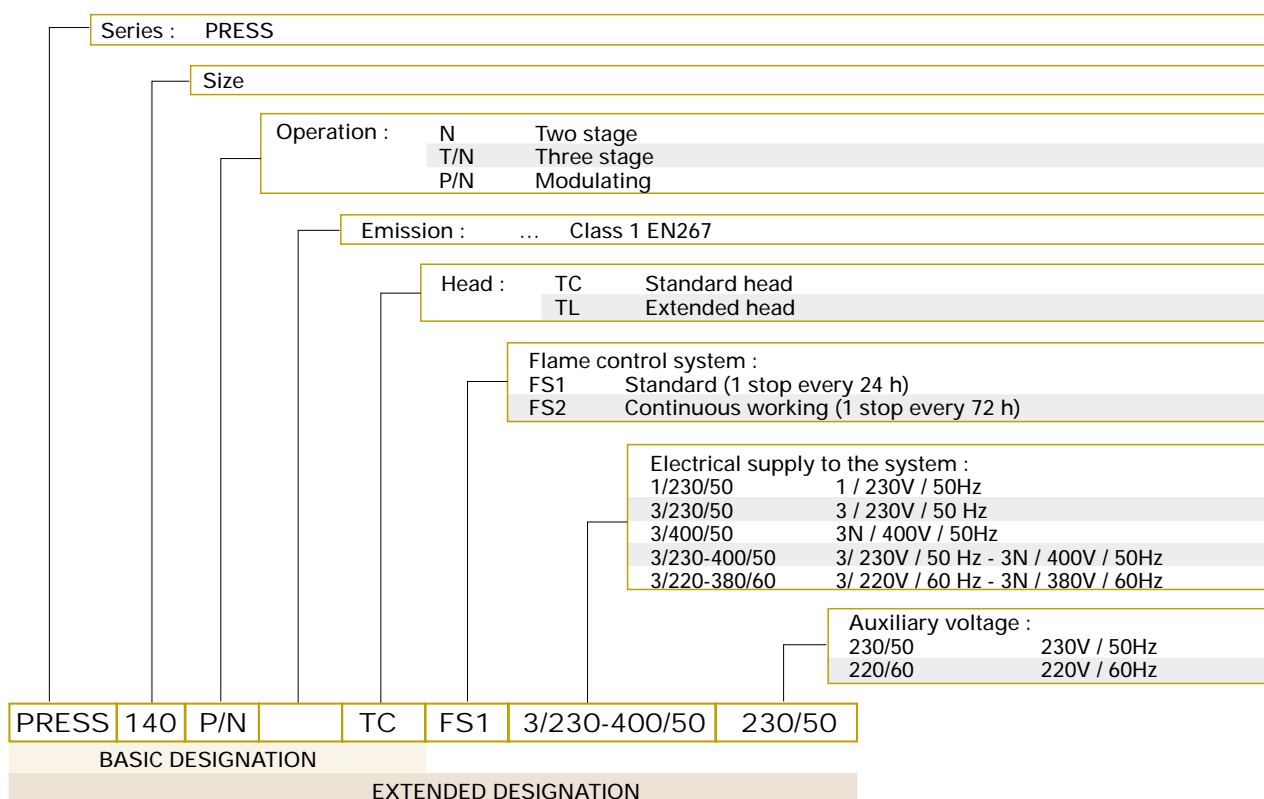

SPECIFICATION

A specific index guides your choice of burner from the various models available in the PRESS P/N series. Below there is a clear and detailed specification description of the product.

PRODUCT SPECIFICATION

Burner:

Monoblock forced draught oil burner with two-stage progressive or modulating operation, with a specific kit, fully automatic, made up of:

- Air suction circuit lined with sound-proofing material
- Fan with forward curved blades high performance pressure levels
- Air damper for air setting and automatic oil output regulator controlled by a servomotor with variable cam
- Starting motor at 2850 rpm, three-phase 400V with neutral, 50Hz
- Combustion head, that can be set on the basis of the combustion output, fitted with:
 - stainless steel end cone, resistant to corrosion and high temperatures
 - ignition electrodes
 - flame stability disk
- Gears pump for high pressure fuel supply, fitted with:
 - filter
 - pressure regulator
 - connections for installing a pressure gauge and vacuumeter
 - internal by-pass for single pipe installation
- Valve unit with a double oil safety valve on the output circuit
- Electrical preheater for heavy oil
- Safety oil pressure switch
- Photocell for flame detection
- Flame control panel, fitted with control function for the correct positioning of the servomotor and possibility of post-ventilation by just changing the electric wiring
- Flame inspection window
- Slide bars for easier installation and maintenance
- Protection filter against radio interference
- IP 40 electric protection level.

Conforming to:

- 89/336/EC directive (electromagnetic compatibility)
- 73/23/EEC directive (low voltage).

Standard equipment:

- 2 flexible pipes for connection to the oil supply network
- 2 nipples for the connection to the pump
- Wiring looms fittings for electrical connections
- 4 screws for fixing the burner flange to the boiler
- Instruction handbook for installation, use and maintenance
- Spare parts catalogue
- 2 slide bar extensions (for the extended head models of P 300 P/N e P 450 P/N)
- Gasket for flange
- Starter*

* for versions with star-delta starting

Available accessories to be ordered separately:

- Return nozzles
- Head length reduction kit (spacer)
- Sound-proofing box
- RWF 40 output regulator
- Pressure probe 0-2,4 bar
- Pressure probe 0-16 bar
- Temperature probe -100-500°C
- Potentiometer kit for the servomotor
- Burner support
- Gas separator bottle
- Selfcleaning filter
- Heavy oil kit
- Heavy oil precirculation
- Cartridge filter.
